

Sales Performance Report

Daily sales, margin and pricing analysis · 30 Dec 2013 – 16 Nov 2016 · 1,053 trading days

Total Sales \$186,909,828	Total Cost of Sales \$194,026,109	Total Gross Profit -\$7,116,281
Average Daily Sales \$177,502	Average Unit Price 37.07	Average Gross Profit % -0.9%
Average Quantity Sold 5,014.1	Highest Daily Sales \$846,678	Lowest Daily Sales \$20,495
Average Price Elasticity -13.06		

Revenue trend

Revenue tracks closely below cost of sales for most of the period, producing a negative aggregate gross profit of -\$7.1M on \$186.9M of sales (-3.8% of revenue).

Monthly sales vs cost of sales

Monthly gross profit

Demand patterns

Weekend trading (Friday–Saturday) delivers the strongest average daily revenue, while volume rises sharply as unit price falls below roughly \$35 — consistent with the elastic demand measured during promotions.

Promotion elasticity

Period	Date	Prev. price	Promo price	Prev. qty	Promo qty	Δ qty %	Δ price %	Elasticity
Period 1	22 Jun 2016	\$42.04	\$33.39	953	4,305	351.7%	-20.6%	-17.09
Period 2	23 Aug 2016	\$42.07	\$33.93	1,035	3,549	242.9%	-19.4%	-12.55
Period 3	20 Jan 2016	\$41.12	\$33.42	1,715	4,776	178.5%	-18.7%	-9.53

All three promotions show highly elastic demand (average elasticity -13.06): a ~20% price cut lifted volume by 178–352%. Discounting drives volume effectively, but with unit economics already negative, deeper cost control is required before further price reductions.

Key takeaways

- Gross margin is negative across most of the period — unit cost exceeds the average \$37.07 selling price.
- Peak daily revenue reached \$846,678 against a low of \$20,495, indicating high day-to-day volatility.
- Demand is strongly price elastic, so volume responds fast to pricing changes in either direction.
- Priority actions: renegotiate cost of goods, review promotional depth, and lean into Friday–Saturday demand.
